

Strip Lighting

BL-LSWPRGB5

BRITE LED TECH PRODUCT

Water Proof – Flexible

1 Year Warranty

150SMD LED RGB Waterproof 5 Meter Strip Meaning Red, Green and Blue led strip, as most of us understand red, green and blue when mixed differently can offer us with all colour scales even white and these leds use this in the one strip so that many many colours can be produced.

It is a flexible strip that can be flexed to a possible 110 degree enabling you to bend round corners without effecting the strips quality and strength.

Has a flexible printed circuit board sealed with a flexible resin and with 3M Adhesive Backing, Low power consumption less heat and quick response to illuminate.

Can be cut to required length in 10cm intervals and simply solder wires onto end eyelets which are located on the printed circuit board every 10cm along if needed.

To be used in conjunction with our RGB led strip controller BL-LSRGBC and if over 15 meter continuous used then will need a amplifier placed inline BL-LSRGA

Smd led strip is 12v though both the controller and amplifier are M/Volt, meaning you can use the led strip, controller or amplifier on 12v or 24v dc applications and use direct off battery or from a DC power supply making fitment to vehicles, home or office easy.

Can be used for

- Automotive decorative lighting
- Advertisement lighting

Also Available in 10cm segments BL-LSWPRGBSEG and 1 Meter Roll BL-LSWPRGB1

Length	5000 mm
Width	10mm
SMD LEDS / 5 Meter	150
Voltage	12 Volt DC
Power Draw Tested @ 13.8 Vt	3 Amps
Packing	5 Meter Rolls [Cut to Size in Meter Lengths]
